EXPERIENCE

C2L Biz Solutions, Mumbai, India

(Aug 2020–Jun 2023)

Software Developer (Java Developer)

- Worked on online Web Portal that receives and stores insurance applications in Oracle database. The application received data from Ruby application from tablet device performed login and data validation for the insurance forms and received the form application in JSON format and stored in Oracle database.
- Worked on application development and production bugs for the online Web Portal, updated the code for better performance and connectivity issues between Ruby application and portal.
- Technologies used were Java, JSP, Spring, javascript, and css.
- Directly communicated with the client for urgent bug fixes and any requirements regarding changes to be made to application. Helped the team members to co-ordinate the work process and also worked for testing the application between the Ruby and online portal.

Fluid AI, Mumbai, India

(May 2019 – May 2022)

Software Developer (Java Developer)

- Worked on multiple bank applications used to create lead data that will be used by the bank to send product ads. The application would get data from multiple databases like Mysql, MSSQL and Oracle and perform the required process and send the data to a CRM service via Soap services. Also created a dashboard to show the reports of the created Leads
- Incorporated Soap services to connect the application to the CRM service. Also used languages like HTML, CSS, Javascript.
- Worked with the client directly to receive the required data for creating application according to client needs.

ApmoSys, Navi Mumbai, India

(Jan 2018 – Apr 2018)

Software Developer (Java Developer)

- Developed an online application that gets the hardware related data present in a system in the same network and present the data in table and graphical format.
 - Used technologies like Java, JSP, CSS, javascript and SNMP.
 - The application was run on two systems as Host and Client. The Host received the hardware information from the client system and displayed the data in graphical format.
-

PROJECTS

Event Management Mobile Application

(Jan 2017– Apr 2017)

- Created a portal for users to create events and share them to other users like social media.
- Worked on PHP, and Java to create front end for the application and a server side program.
- Added a chat box feature for users to communicate with each other for event details.
